

MECHANICAL PULVERIZER

MTB MECHANICAL PULVERIZER - MPLV

MPLV Concrete Pulverizer stands out by eliminating the need for additional hydraulic components in primary and secondary crushing operation. This feature offers advantages such as ease of maintenance, low cost, easy installation and rapid opening and closing of jaws. MPLV uses dual-position attachment technology, which mounts to the excavator without requiring welding. Additionally, the open-jaw design prevents material accumulation. The MPLV is mounted on the excavator in the same way as the bucket and produces tremendous crushing power using the excavator's boom cylinder. It can be produced to suit all excavator brands and models.
